

Culligan Water.

Cleaner, better water. Every drop, every day.

Aquasential™ Select Plus Series™ Iron-Cleer® Water Filters

SYSTEM BENEFITS

- Controls Staining - no more iron stains on your fixtures.
- Reduces Odors - no more of that "rotten egg" smell.
- Easier Cleaning - your whole household will be easier to clean.
- Brighter Wash - your washables will be stain-free and brighter.
- Great-Tasting Water - you'll notice the improvement immediately.

Good water should be simple.

Problem water takes on many different aspects: The unsightly orange and red stains in your bathroom and the ugly rust stains on your clothes, dishes and fixtures can be caused by iron in your water. Bad odor and unsightly black stains can be due to the presence of hydrogen sulfide*.

Culligan has effective solutions to these and other water problems you may have. All Culligan filters are customized to handle your specific type of problem water.

An Aquasential™ Select Plus Series™ Iron-Cleer® Water Filter is the simple and affordable way to give you cleaner, clearer water that reduces staining and provides more peace of mind.

Product Specifications

Patented Smart Technology

- The air compressor is key to the aeration process which oxidizes dissolved iron and hydrogen sulfide*.
- On/off times adjustable to your specific water characteristics.
- Bypass valve provides the convenience of bypassing the water filter for other uses, such as watering the lawn.
- Culligan patented Accusoft electronics automatically controls all cycles - providing customized service for your individual needs.
- Requires no chemicals for operation or reconditioning. Oxygen is used to naturally clean your water.
- One-button reconditioning cycle provides an extra supply of filtered water when there are more people than normal in the home providing worry-free water for everyone.

Unique Media Filter

- The media in the filter tank acts as an insoluble catalyst to enhance the reaction between the oxygen, iron and hydrogen sulfide for efficient filtration.

Chemical-Free

- Requires no chemicals for operation or reconditioning. Oxygen from the compressor is used to naturally clean your water.

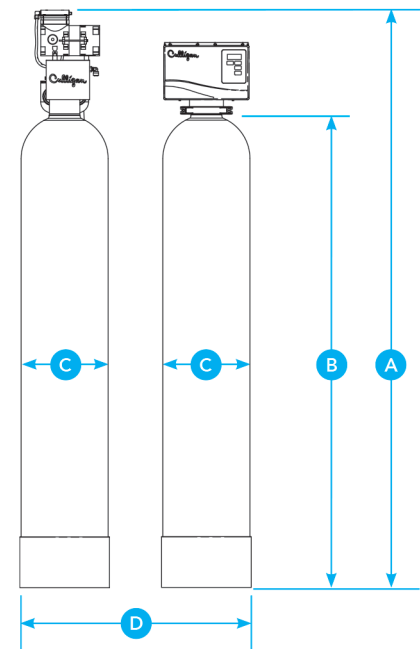

Two-Tank System

- Water flows through the aeration tank (1st tank) which converts dissolved iron and hydrogen sulfide into a particulate form. The particulates are then filtered by the catalytic multi-media tank (2nd tank).

Exclusive Reliable Design

- Mechanical improvements including design updates and electronic monitoring of control valve cycles make sure it's always in peak condition.
- Exclusive, non-corrosive valve using motorized pistons that provide more reliability than rotary valve systems.
- Sturdy media tank with filament-wound exterior, and smooth, non-permeable inner tank shell.

CAUTION: Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system. The contaminants or other substances removed or reduced by this water treatment device are not necessarily in your water.

* Not WQA certified for Hydrogen Sulfide reduction. Hydrogen Sulfide reduction based on internal testing by Culligan International R&D lab.
